Supplier Quality Analysis Report

Q1 2026 Management Report

Period	2026-01-01 to 2026-03-31
Supplier scope	2 represented
Report generated	2026-10-20T19:39:47.324106+00:00
Task	T-43f4e3d8...

Executive Summary

Analysis period Q1 2026	Suppliers represented 2
Observed months 3	Evidence items 2

The controlled Q1 2026 analysis covers 2 supplier(s) represented in Calculation Evidence across 3 observed monthly period(s). It reports monthly defect rates and within-quarter period-over-period changes. Quarter-over-quarter comparison, supplier ranking, and root-cause conclusions are not available under the current analytics contract.

Key observations

- Supplier quality coverage. Calculation Evidence contains controlled quality metrics for 2 supplier(s) across 2026-01, 2026-02, 2026-03.
- Within-quarter trend view. The available trend metric compares each observed month with the prior observed month; the first month has no comparison baseline.

Recommended focus

- Review recorded deviations and confirm the stated data and calculation limitations.

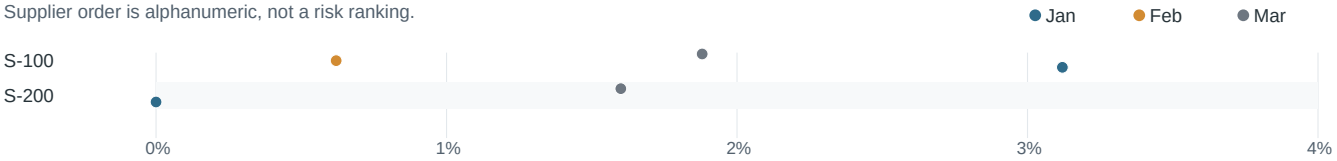

Supplier Quality Overview

Monthly values reproduce existing defect-rate Calculation Evidence. Latest change is the final available month-over-month ratio delta.

Supplier	Jan rate	Feb rate	Mar rate	Latest change
S-100	3.12%	0.62%	1.88%	+1.26 pp
S-200	0.00%	N/A	1.60%	N/A

Supplier Defect Rate - Q1 Monthly View

Supplier order is alphanumeric, not a risk ranking.

Unit: percent. Each dot is a formatted view of one existing defect_rate value; no ranking or aggregate KPI is calculated by the renderer.

Applicable Quality Policies

Controlled document references are summarized here. Full retrieved excerpts and Evidence identifiers are retained in Appendix B.

Document	Version	Relevant topic	Page / chunk	Evidence
No controlled policy Evidence	-	-	-	-

Data Coverage

Evidence	Query ID	Rows	Snapshot
E-4f335c2e...	8c1e47fd7a...	6	2026-10-20T19:39:40.712986+00:00

Policy comparison boundary

The current contract retrieves controlled policy context but does not define a deterministic threshold-classification rule. This report therefore does not label suppliers as compliant, non-compliant, high risk, or low risk.

Findings and Recommended Actions

Major Findings

Finding	Evidence-backed observation	Evidence
Supplier quality coverage	Calculation Evidence contains controlled quality metrics for 2 supplier(s) across 2026-01, 2026-02, 2026-03.	E-4f335c2e..., E-d530196e...
Within-quarter trend view	The available trend metric compares each observed month with the prior observed month; the first month has no comparison baseline.	E-d530196e...

Business Risk Context

Classification	Statement	Evidence
INFORMATIONAL	The current analytics contract does not classify business risk or apply policy thresholds. Analytics notes are consolidated in Methodology and Limitations and must not be interpreted as business-risk findings.	E-d530196e...

Recommended Actions

Action	Basis	Evidence
Review recorded deviations and confirm the stated data and calculation limitations.	GENERAL_CONTROL	-

No priority level is assigned because the current deterministic contract does not define an action-prioritization rule.

Methodology and Limitations

Calculation methodology

Metric	Controlled formula
defect_count	sum(defect_count)
defect_rate	sum(defect_count) / sum(inspected_count)
inspected_count	sum(inspected_count)
period_over_period_trend	current_period_defect_rate - previous_period_defect_rate

Ratios are displayed as percentages. Ratio deltas are displayed as percentage points (pp). Canonical raw ratios, operands, and units remain unchanged in Appendix A and in the embedded report model.

Analytics notes and limitations

Code	Interpretation boundary
RANKING_NOT_AVAILABLE	Supplier ranking is not produced because quality_metrics.v1 does not define a ranking operation.
DETERMINISTIC_SCOPE	The report reproduces approved Evidence and Analytics outputs and does not infer root causes.
QUARTER_COMPARISON_NOT_AVAILABLE	Quarter-over-quarter comparison is not available because the authorized database request and quality_metrics.v1 calculation cover Q1 2026 only.
FIRST_PERIOD_TREND_BASELINE	The first observed month has no previous-month comparison, so its period-over-period trend is not defined. This is an analytics note, not a business risk.
POLICY_CLASSIFICATION_NOT_AVAILABLE	No deterministic rule in the current contract applies policy thresholds or assigns supplier risk levels.
ZERO_DENOMINATOR_ANALYTICS_NOTE	One or more defect-rate or trend values are undefined because an observed period has zero inspected_count; affected raw metrics remain visible in Appendix A.
POLICY_EVIDENCE_MISSING	No controlled policy Evidence was available.

Verification lifecycle

This PDF is created before the independent workflow verifier runs. The final verification result is stored with task and Artifact metadata; it is not hard-coded into this render-time document.

Appendix A - Detailed Calculation Metrics

All canonical Analytics observations are retained below for audit. Values and formula operands are raw; no presentation scaling is applied.

Metric	Supplier	Period	Raw value	Unit	Formula operands
defect_count	S-100	2026-01	1	count	1 / null
defect_count	S-100	2026-02	1	count	1 / null
defect_count	S-100	2026-03	3	count	3 / null
defect_count	S-200	2026-01	0	count	0 / null
defect_count	S-200	2026-02	0	count	0 / null
defect_count	S-200	2026-03	2	count	2 / null
inspected_count	S-100	2026-01	32	count	32 / null
inspected_count	S-100	2026-02	160	count	160 / null
